gree Program for Economic Statistics

The objective of this program is to cultivate compound high

III

Basic requirements for Cultivation

1. 2. 3.

4.

Based on the advantages of our Department and its prominent characteristics, emphasis on the application, students are trained to become complex, application-oriented talents based on economics and statistical. Through learning and training, students in the specialty should meet the following training requirements:

1. Understand the foundations of mathematics and strict scientific thinking training;

2. Develop a solid foundation in economics, the country's economic development principles, policies and regulations, statistical theory, methods and its application, and the ability to use information for statistical analysis and management;

3. Master the basic theory, knowledge, methods and skills of computers and statistics; with the capacity of data collection, questionnaire design and dealing with survey data; and the capacity to analyze and solve practical problems in certain areas of applied statistics;

4. Master data query, document retrieval and accessing relevant information with modern information technology; as well as scientific research and practical work capacity.

Courses

Statistics, Econometrics, National Economic Statistics, Market Research and Prediction, Multivariate Statistics, Time Series Analysis, Sampling Techniques and Applications, Principles and Applications of Big Data Technology, Statistical Software etc.

Experimental courses (including statistical software application, panel data analysis, etc.), social practices (including market research and prediction, etc.), research and thesis writing etc.
